

Git: versioning painkiller for the busy agronomist

Antoine Languillaume – PPS Lunch meeting 21-04-21

Science, Data Analysis, Modeling
needs Code

How to keep track of the changes in our code ?

Usual Disclaimer:
This is not a geek-only seminar

Problems: git will solve for you

Problems: git will solve for you

- Keep track of your research project
- Collaborate efficiently with others
- Disseminate your work

Suppress warnings from `extract_area()`

Set calling handler sentinel scanning warning and promoting them to error if not corresponding to the matching pattern. This is probably not due to `raster::extract()` directly but more likely to `furrr::future_map()` calling `raster::extract()`.
